

Lubricant Applicator USER GUIDE

A Lubricant Applicator is one of those “best things you’ve never heard of” because it enables a nice, slippery interior cushion- an essential for penetrative butt sex. The narrowed injector of the applicator makes it extra comfortable to ease into butt play by lubricating the hard to reach places in the anal canal. It has convenient finger grips that allow precise insertion. It is as simple as loading it up and shooting it in.

- Step 1 Wash the outside of the applicator with a mild soap and warm water.
- Step 2 Simply place the lube launcher into your favorite lube and pull the ring upwards.
- Step 3 Lubricate the outside of the launcher and gently slide it into the anal opening.
- Step 4 Once the applicator is inside the anal canal, press the handle inward . The lubricant will go in easily.
- Step 5 Immediately cleanse the applicator with a mild soap, let air dry, and then store away.
